Women gave fewer births in 2015 as compared to 2014. The number of births occurring in the Republic of Mauritius in 2015 was 12,640 (6,557 male and 6,083 female) compared to 13,346 (6,760 male and 6,586 female) in 2014 corresponding to a crude birth rate of 10.1 per 1000 mid-year population compared to 10.6 in 2014. The total fertility rate which can be calculated as the average number of children born per woman was 1.43 and 1.36 respectively for 2014 and 2015.

1.3 Infant and Maternal Mortality Rate

The number of infant deaths, that is deaths among children aged under one year, registered in 2015 was 173, corresponding to an infant mortality rate 13.6 per thousand live births compared to 14.5 (194 infants deaths) in 2014.

In 2015, the number of maternal deaths registered was 6 compared to 7 in 2014. The maternal mortality rate per 1,000 live-births dropped from 0.52 in 2014 to 0.47 in 2015.

1.4 Deaths

In the Republic of Mauritius, the registered number of deaths for 2015 was at 9,747 (5,444 male and 4,303 female) compared to 9,682 (5,329 male and 4,353 female) in 2014 giving a crude death rate of 7.7 per 1,000 mid-year population same as in 2014. Lower mortality was observed for women than for men, with crude death rate being 8.7 for men and 6.7 for women.

The major cause of death among men and women in 2015 was diabetes, heart diseases and cerebrovascular diseases. Diabetes accounted for 1,128 (26.2%) deaths among women and 1,209 (23.0%) deaths among men. Heart diseases and cerebrovascular accounted for 875 (20.3%) and 370 (8.6%) deaths among women and 1,065 (19.6%) and 466 (8.6%) deaths among men.

Diseases specific to women, such as breast cancer, cervical cancer, cancer of uterus including cervix uteri and 'complications of pregnancy and childbirths', resulted in 260 (6.0%) deaths among women. On the other hand, 'prostate cancer', which is applicable to men only, was the cause of 66 (1.2%) deaths among men.

1.5 Marriages

In the Republic of Mauritius, the number of registered marriages decreased from 9,959 in 2014 to 9,709 in 2015, giving a crude marriage rate, defined as the number of persons getting married per 1,000 mid-year population of 15.4 against 15.8 in 2014. In the Island of

Mauritius it decreased from 9,796 in 2014 to 9,548 in 2015, giving a crude marriage rate of 15.6, against 16.1 in 2014 and in the Island of Rodrigues it decreased from 163 to 161 for the same period giving a crude marriage rate of 7.7 compared to 7.8 in 2014.

1.6 Divorces

There were 2,161 divorces registered for the Republic of Mauritius in 2015, showing a decrease of 101 as compared to 2014 (2,262). The crude divorce rate decreased from 3.6 persons divorced per 1,000 mid-year population in 2014 to 3.4 in 2015.

1.7 Marital status

The 2011 population Census data for the Republic of Mauritius revealed that, out of the 981,085 persons aged 15 years or more, 578,326 (58.9%) were married or living with a partner. On the other hand, 271,144 (27.6%) persons were single. The number of widowed and divorced/separated was 79,975 (8.1%) and 41,026 (4.2%) respectively.

The proportion of single (never married) persons was higher among males than females. About 33.2% of males were single against 22.3% for females, mainly because women tend to get married at an earlier age than men.

Widowhood was found to be higher among women than among men as a result of a higher life expectancy among women. There were 69,392 (13.9%) women who were widowed against 10,583 (2.2%) men.

The proportion of married was about 60.0% among men and 57.9% among women.

1.8 Life expectancy

There has been a general improvement in life expectancy over the years though improvement was more pronounced among males. This has led to a decrease in the gap in life expectancy at birth between males and females from 7.3 in 2010 to 6.7 in 2015. The life expectancy at birth for 2014 in the Republic of Mauritius was 77.8 years for women compared to 71.1 years for men. Life expectancy among males as well as that among females increased to reach 71.2 years and 77.9 years respectively in 2015.

2. Education

In 2000 and 2011 Population Censuses data revealed that though the overall educational attainment is higher among male population, there are no marked differences between men and women at the different levels. Among those aged 15 years and above, 86.4% of women had attained primary education or higher against 94.7% among men in 2000, whilst in 2011, the corresponding figures were 92% and 97.4% respectively. The pre-primary school population in the Republic of Mauritius was 29,832 in 2015 compared to 30,142 in 2014. Boys represented 50.3% of the 2015 pre-primary school population and girls 49.7%. The Gross Enrolment Ratio (pre-primary enrolment as a percentage of the population aged 4 to 5 years) was 101 % for boys, same as for girls.

The primary school population in the Republic of Mauritius was 101,422 in 2015 compared to 105,300 in 2014. Boys represented 50.6% of the 2015 primary school population and

girls 49.4%. The Gross Enrolment Ratio (primary enrolment as a percentage of the population aged 6 to 11 years) was 97 % for boys and 98% for girls.

However, at secondary level (academic), the Gross Enrolment Ratio (GER) was higher for girls than for boys. The 2015 Gross Enrolment Ratio was 78% for girls against 69% for boys.

Regarding overall performance in examinations, it was observed that girls were more successful than boys. In 2015, the pass rate among school candidates who took part in the Certificate of Primary Education (CPE) examination was 80.7% for girls as compared to 67.9% for boys. For the School Certificate (SC) examinations, girls recorded a higher pass rate, 76.4% against 67.9%. The pass rate for girls at the Higher School Certificate (HSC) was 77.8% against 72.0% for boys.

3. Economic Characteristics

As in previous years statistics indicate that women are still less economically active than men. In 2015, 46.6% of women aged 16 years and above were actively participating in the economy against 74.8% among men of the same age group. The corresponding percentages for 2014 were 45.4% and 75.2% respectively.

In 2015, nearly 46% of working men were either employed as plant and machine operators or engaged in elementary occupations. About 19% of them were service and sales workers. As regards to working women, nearly 31% were either employed as plant and machine operators or engaged in elementary occupation. About 23% of them were service and sales workers.

Among employed women, 21.6% drew an average salary of up to Rs 4,000 compared to 8.2% among employed male. Only 45.1% of employed women received a salary above Rs 10,000 while the percentage stood at 66.6% for their male counterparts. ¹In September 1997, the Family Counselling Service (FCS) was renamed the Domestic Violence Intervention Unit (DVIU). It later on (August 2003) merged with other services (as the Child Dev. Unit) & was known as the Integrated Services Centre (ISC). As from June 2004 it was renamed the Family Support Bureau (FSB).

²Also includes child cases as from **August 2003** as all services (FCS, CDU & DVIU) were integrated to a single service (ISC now FSB). However, cases by 'nature of problem' refer to **adult cases only**.
